AUSTIN SCHLUTTER

Rensselaer Polytechnic Institute Electrical and Computer Engineering

Irvine CA

(949)-244-0696

austinschlutter@gmail.com

github.com/austinjames95

EXPERTISE

Computer Programing

Python, JavaScript, C++/C, Java

Web Development

Frontend: React, HTML/CSS

Backend: Node.js, Firebase

Data Science & Analysis

Data Visualization and analysis

Statistical Modeling

Leadership & Soft Skills

Team collaboration

Leadership

Project Management

Cross-Functional Communication

EDUCATION & ACOMPLISHMENTS

COLLEGIATE ATHLETE
Rensselaer Polytechnic Institute
Men's Soccer
2024 – 2025

BACHELOR'S DEGREE IN PROGESS
Rensselaer Polytechnic Institute
2024 – 2028

HIGH SCHOOL EDUCATION
JSerra Catholic High School
2020-2024

LEADERSHIP AWARD
JSerra Catholic High School
Boys' Soccer
2024

CAREER SUMMARY

Throughout my career, I have developed strong technical and leadership skills across software development, research, and entrepreneurship. From founding a successful 501c3 organization that has raised over $80,000 to conducting cancer research at City of Hope, I bring diverse problem-solving experience. As an electrical engineer, I excel at building scalable solutions and collaborating with cross-functional teams. I pride myself on combining technical excellence with strong communication and leadership abilities.

PROFESSIONAL EXPERIENCE

Independent Research MARCH 2026 – CURRENT
EIT-tek – www.eit-tek.com

I founded EIT-tek after comepleting my internship at City of Hope Hospital, I became interested in non invasive forms of medical imaging. Given my background as an athlete I saw first hand the need for a portable, non-invasive imaging device that can help trainers and atheletes asses muskoskeletal health in real time, by using electrical impedance tomography I am building a device that can do just that.

FOUNDER AUGUST 2025 – CURRENT
tasteCampus – www.tastecampus.com

I founded tasteCampus after seeing a growing issue within the university admissions field, many university lead tours are inaccurate and biased, tasteCampus is a company that I founded that is current developing software solutions to this issue. We are currently partnering with a pilot school to see how our service is recieved by the public

RESEARCH INTERN (SOFTWARE DEV) MAY 2025 – MARCH 2026
City of Hope Cancer Research Center

During the summer of 2025 I was fortunate enough to work at the City of Hope Cancer Research Center in Duarte California on a research project studying the effects of varying radiation dosages on the immune system. My code analyzed images of PET and CT scans that mapped changes of white blood cells in regions of interest. My program was compared against an industry standard software where errors were negligible, allowing researchers to specialize code to fit their needs.

- Analyzed cancer patient data and wrote a program in python that visualized results based on CT and PET data.
- Worked with PHD researchers on a funded research project by City of Hope Cancer Research Center
- Improved upon python programing skills with handling of large datasets and by creating vital analytics
- Created a patient anonymizer for ongoing research project

FOUNDER SEPTEMBER 2021 – AUGUST 2024
SimplyEwaste – www.simplyewaste.com

During the COVID-19 era I founded and successfully ran a 501c3 organization that collected electronic waste from local businesses in the Orange County area and refurbished devices that were then donated to organizations in need. SimplyEwaste has donated over $80,000 dollars in refurbished systems to schools, charities, and philanthropic organizations across California.

- Media coverage from multiple new sources such as Disrupt Magazine, Newsbreak, and have been highlighted in multiple social media posts.
- Managed 2 employees who now run the charity on my behalf.
- Donated to Codology, Cristo Rey Orange County, Lauras House, The Boys and Girls Club, Project Self-Sufficiency, and Warrior for Children.
